# Is Your Microsoft 365 Environment Truly Secure?

## Microsoft 365 Security Assessment

Security events such as data breaches, credential theft, and ransomware attacks can cripple your business and erode trust. With Microsoft 365 at the core of your operations, securing it is non-negotiable.

Our Microsoft 365 Security Assessment reveals vulnerabilities, strengthens defenses, and provides a roadmap to a more secure cloud environment.

## Why It Matters

Microsoft 365 is a powerful platform—but it's also a major target for cyberattacks. Without proactive monitoring and security controls, your business faces:

- Unauthorized access to sensitive data
- Credential compromise and account hijacking
- Compliance risks and penalties
- Downtime, data loss, and reputational harm

## What We Review

We provide a comprehensive, expert-led review of your Microsoft 365 environment, including:

- Evaluation of your Microsoft Secure Score
- Identification of external and internal access risks
- Detection of malware, ransomware, and compromised credentials
- Review of security configurations and policy enforcement
- Visibility into user behavior and permission management

## What You'll Get

- Your current Microsoft Secure Score summary
- List of prioritized remediation recommendations
- Severity rankings and security control insights
- Custom roadmap for improving security posture
- Guidance on implementing a quarterly update and review program

## Why Sourcepass MCOE?

As a Microsoft Solutions Partner for Security, Sourcepass MCOE brings deep expertise and practical know-how to every engagement. Our team helps organizations secure their Microsoft environments without overcomplicating the process.

**SOURCEPASS MCOE** CENTER OF EXCELLENCE FOR MICROSOFT
